

Manufacturing:

How a leading SME Battery producer in India with multi-facilities leverages RPA(Digital Workforce) for their SCM Procurement posting automation in ERP.

ROBOTIC PROCESS AUTOMATION A USE CASE

TSS Bots anywhere

Client Challenges:

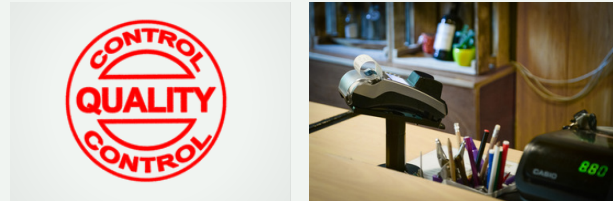

Consolidating GR & IR at multiple facilities was time consuming, redundancy and delay in time to approval for payment.

The company adheres to supply chain management system facilitated by the ERP. Items delivered simultaneously to multiple facilities by the one or more suppliers has to be collected, inspected, accepted or rejected, quarantined, & enable intra-facility transfers for further process and steps. There is a pile-up of invoices and delivery challan / notes, hence a pressing need to evaluate the business process management.

Observation:

Availability of skilled resources to process the gate entry to goods receipt note was time consuming

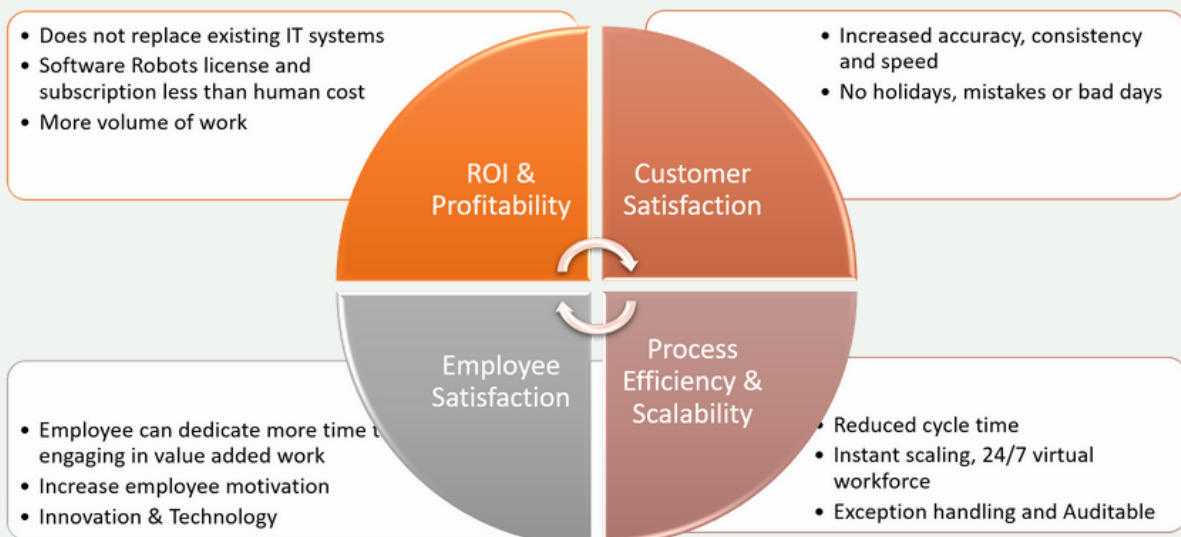

Solution offered:

Bot was empowered to read and interpret the scanned copy of the invoice / delivery note. It further processed the same into the SAP system's user interface. Goods Received Note / Number was generated and provided back to suppliers as acknowledgement emails. Any exceptions like hand written invoice / delivery notes were routed through human agent instead of Bots. The Bots were further trained to expedite RFQ data management, PO transmission, Deficits management, with Automated execution of underlying ERP and the manufacturing company has leveraged the Digital work force in an affordable cost.

Key benefits :

TechniSMART
SOLUTIONS

TechniSMART Solutions provides solutions to improve time to market, reducing product cost and help migrate business process towards lean engineering and manufacturing process. TSS headquartered in UK and support team spread across Pune, Mumbai, Chennai and Bangalore
